

Two useful paths, at different product stages.

Bilt accelerates the prototype. A React PWA removes the audience-install barrier.

RAPID PROTOTYPE

Prototype quickly

Beginner-friendly, integrated and impressively mobile from the first iteration.

- Natural-language building
- Integrated backend workflow
- Native-quality experience
- Guided QR sharing & publishing

Trade-off: preview users still need Expo Go.

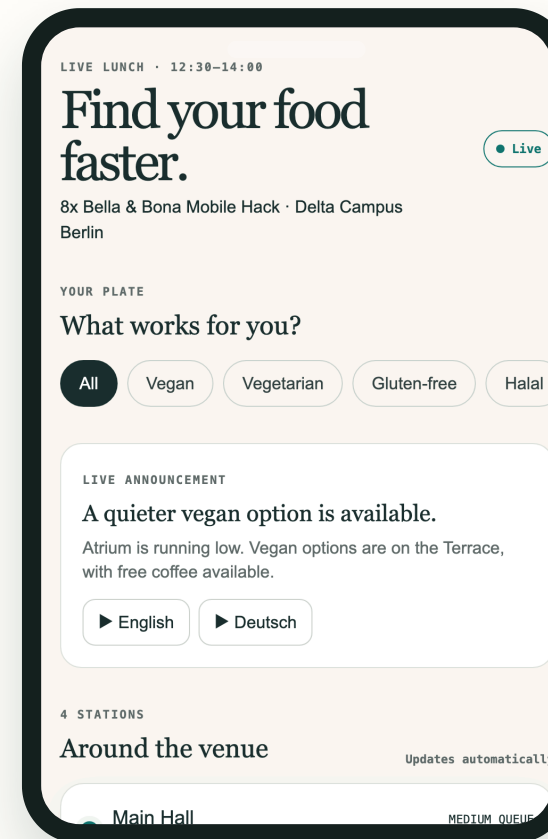

React + PWA

LIVE REACT PWA

Open instantly

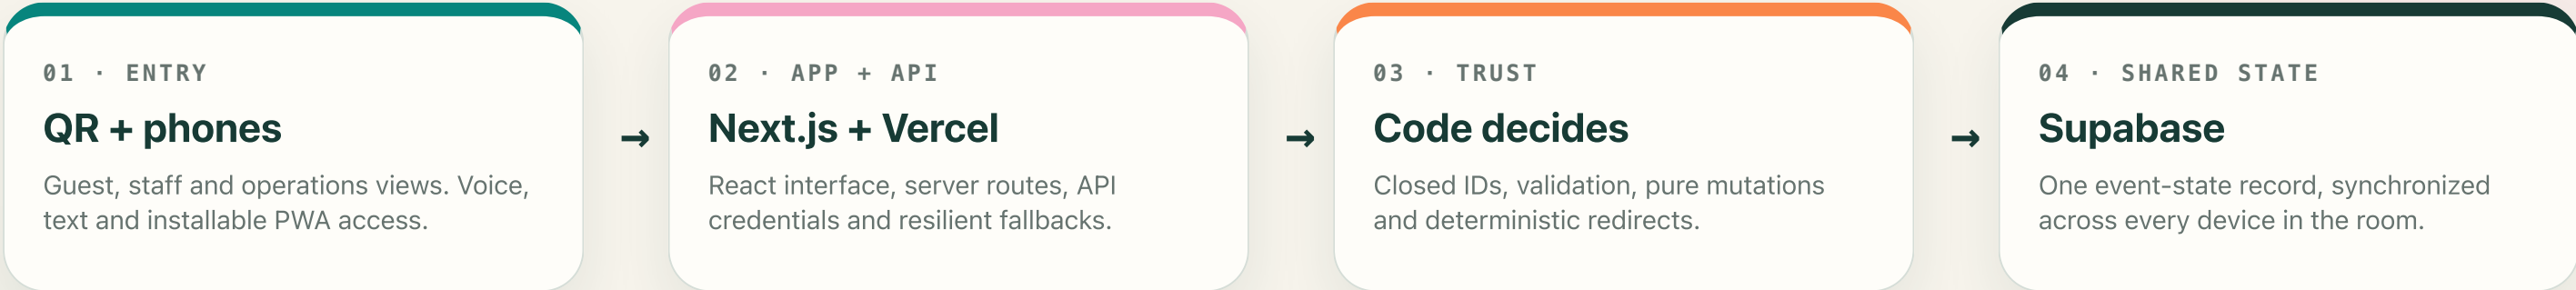

More engineering control, with direct access for every guest in the room.

- QR opens in the browser
- Installable without a store release
- Full validation & integration control
- GitHub → Vercel deployment
- Built for event-wide reach

Bilt proves the experience. The PWA removes the distribution barrier.

A staff report becomes a trusted update on every phone.

- N** **Nebius**

Model proposes → validation checks → code applies
- 11** **ElevenLabs**

Speech-to-text + bilingual announcements
- GH** **GitHub → Vercel**

Committed source and repeatable production deployment

MODEL PROPOSES. CODE DECIDES.

AI never writes operational state directly.

Suggested stations and dishes must remain inside the current closed set and pass deterministic eligibility checks.

Failure path: keyword interpretation + visible text.

One shared operational loop LIVE

STAFF REPORTING

Keep the room moving.

One tap updates every view.

STEP 1

Choose your station

Main Hall Atrium

Terrace Grab & Go

QUICK UPDATE

No AI, one tap

Stock running low → Item sold out →
